

Finals Lab Task 3. Using Dax Time Intelligence Function

Zarate, Arrel R. - C303

Lopez, Jane Ryza S.

Overview:

In this lab, you'll create measures with DAX expressions that involve time intelligence.

In this lab, learn how to:

- Use various time intelligence functions to manipulate filter context that specific concerns dates.

The screenshot displays the Power BI Desktop interface. On the left, the DAX formula bar shows the following code for 'Sales YoY Growth':

```
1 Sales YoY Growth =
2 VAR SalesPriorYear =
3     CALCULATE(
4         SUM(Sales[Sales]),
5         PARALLELPERIOD(
6             'Date'[Date],
7             -12,
8             MONTH
9         )
10    )
11 RETURN
12     DIVIDE(
13         (SUM(Sales[Sales]) - SalesPriorYear),
14         SalesPriorYear
15    )
```

The center pane shows the data model with tables: Sales, SalesPriorYear, Region, Salesperson, and SalespersonRegion. The right pane shows the 'Properties' and 'Data' tabs. The 'Data' tab is active, showing a list of measures including 'Sales YoY Growth'.
